## CONSERVATION TIPS & FACTS

BY CONSERVICE  
utility management & billing

- Don't let the faucet run while shaving or brushing your teeth.
- In the kitchen, wash fruit and vegetables in a pan rather than letting the water run.
- Keep a pitcher of water in the fridge to avoid wasting time waiting for the water to cool.
- Take a short shower rather than a bath to save water.
- Even a one or two minute reduction in shower time can save up to 700 gallons a month.
- Wait until the dishwasher is full before running it to get the most out of each load.
- When washing dishes by hand, use the least amount of detergent possible to minimize need for excessive rinsing.
- Throw away food scraps rather than putting them down the disposal, which wastes water and is harder on your plumbing.
- Check your toilet for leaks regularly to ensure you aren't wasting water.
- Save over 500 gallons per person a month by using a low flow (1.6 gal/flush) tank vs. an older model (5 gal/flush).
- Wash full loads of laundry to reduce total number of loads needed.
- If your washing machine has energy-saving settings, use those settings whenever possible.

**A RUNNING BATHROOM FAUCET = 2 gallons/minute**

**7 MINUTE SHOWER = 14 GALLONS**  
**20+ GALLONS TO FILL A TUB**

**in a city toilet can WASTE 200 gallons EVERY DAY**

**DISHWASHER = 4.6 GAL/LOAD vs. 20 GAL BY HAND**

**high efficiency has less than 27 GALLONS/LOAD vs. older models up to 54 GALLONS/LOAD**

When you **CONSERVE** you save.

[www.naturalgas.org/public.com/everyday/greenhouse/tips](http://www.naturalgas.org/public.com/everyday/greenhouse/tips)

- ✓ Every time you use cold water instead of hot, you save energy and money.
- ✓ A dripping faucet is more than annoying... it's expensive. Report leaky faucets to save on your water bill.
- ✓ Leaks inside the toilet can waste up to 300 gallons of water a day. Toilet leaks can be detected by adding a few drops of food coloring to water in the toilet tank. If the colored water appears in the bowl, the toilet is leaking.
- ✓ Refrigerate a bottle of drinking water instead of letting a faucet flow until the water is cold enough to drink.
- ✓ Cut down on the amount of rinsing you do before loading the dishwasher. Most modern dishwashers do an excellent job of cleaning dishes, pots, and pans all by themselves.
- ✓ Don't let the faucet run while you clean vegetables. Rinse them in a filled sink or pan. This can save 150 to 250 gallons a month.
